

Investment package: which of these options do you prefer?

Please select the level of investment you would prefer.

The slider is positioned on United Utilities' proposed level of investment for the areas not fixed by law in their Drainage and Wastewater Management Plan. Please move the slider up and down and decide which level of investment you want United Utilities to provide.

- **Bill impact:** the change in the average monthly bill.
- **Inside home flooding risk:** this bar shows the risk that homes and businesses could experience sewer flooding internally.
- **Pollution to water environment:** The risk that a sewer blockage, burst pipe or power failure may cause an accidental pollution incident in the natural environment such as rivers and reservoirs. A pollution incident is when untreated wastewater is released to land or water that could potentially harm people or the environment. These are tightly controlled by Regulators. **Please note that this bar will not move regardless of the level of investment selected because United Utilities is committed to minimising this going forward.**
- **United Utilities' carbon footprint:** the total amount of carbon dioxide (CO₂) emissions generated by United Utilities' operations (e.g. vehicle movements and construction).
- **Environmental & social benefit:** the benefit to the environment (nature, wildlife and biodiversity) and people in the region (e.g. creating jobs, protecting green spaces for public health and wellbeing).
